LEGACY CODE MODERNISATION AND BUSINESS TRANSFORMATION

Legacy code is holding back your AI ambitions. We modernise it in weeks, not years.

Our own **AI code transformation tool suite powered by Claude**, rebuilds Java, PHP and .NET applications on a modern, secure, cloud-ready stack so your team builds the future instead of maintaining the past.

~~Java · JSP · Struts~~ ↓ **Java 21 · Spring Boot microservices**

~~Core PHP · old Laravel~~ ↓ **Latest Laravel · API-first services**

~~ASP.NET MVC · .NET 4.x~~ ↓ **.NET 10 · cloud-ready services**

Monolith to microservices

Break one large application into independently deployable, API-first services that are container- and cloud-ready.

Find and close vulnerabilities

Scan code and dependencies for OWASP-class flaws and outdated libraries, and fix them in the same transformation pass.

Faster, leaner applications

Modern runtimes, cleaner data access and dead code removed — performance gains come with the upgrade.

Responsive React or Angular UI

Old JSP, Razor and PHP screens rebuilt as a modern, mobile-ready interface your users will actually enjoy.

HOW IT WORKS

01 Assess
Code scanned; SRS and architecture rebuilt from the code itself.

02 Transform
Module by module to the new stack, business rules preserved.

03 Verify
Automated tests, old-vs-new behaviour checks and security scans.

04 Deploy
Through a DevSecOps pipeline, UAT-ready on every build.

~9×
faster than manual estimates on our own portal modernisation programme

7
legacy portals on Java, PHP and .NET being modernised in ~11 weeks

416
person-months of manual effort avoided across five of those apps

Get ahead in the AI race. Start with your code.
